EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Andrew Waxman on September 30, 2005.

The application has been amended as follows:

1. (Currently Amended) A generator output line for electrically connecting a generator to a transformer, comprising:

a cylindrical inner conductor including an internal conductor tube and an external conductor tube; and

a cylindrical cladding tube connection region, arranged concentrically with respect to the inner conductor, wherein current paths in a longitudinal direction of the inner conductor are adapted to change between the external conductor tube and the internal conductor tube at least once.

- 3. (Currently Amended) The generator output line as claimed in claim 1, wherein current paths in a direct-axis direction of the inner conductor are adapted to change once, at a central position in the longitudinal direction of the inner conductor, between the external conductor tube and the internal conductor tube.
- 7. (Currently Amended) The generator output line as claimed in claim 2, wherein current paths in a direct-axis direction of the inner conductor are adapted to change once, at a central position in the longitudinal direction of the inner conductor, between the external conductor tube and the internal conductor tube.

Page 3

Application/Control Number: 10/685,784

Art Unit: 2831

19. (Currently Amended) A generator, comprising:

an output line, wherein the output line includes,

a cylindrical inner conductor including an internal conductor tube and an external conductor tube, and

a cylindrical cladding tube connection region, arranged concentrically with respect to the inner conductor, wherein

current paths in a longitudinal direction of the inner conductor are adapted to change at least once between the external conductor tube and the internal conductor tube.

22. (Currently Amended) A generator, comprising:

a generator base, including an opening through which three electrical connections of a three-phase system exit the generator base, wherein generator output lines of the three phases each include,

a cylindrical inner conductor including an internal conductor tube and an external conductor tube, and

a cylindrical cladding tube connection region, arranged concentrically with respect to the inner conductor, wherein

current paths in a longitudinal direction of the inner conductor are adapted to change between the external conductor tube and the internal conductor tube at least once.

26. (Currently Amended) The generator as claimed in claim 22, wherein current paths in a direct-axis direction of the inner conductor are adapted to change once, at a central position in the longitudinal direction of the inner conductor, between the external conductor tube and the internal conductor tube.

Allowable Subject Matter

3. Claims 1-16, 18-19, 21-24, and 26-27 are allowed.

4. The following is an examiner's statement of reasons for allowance: This invention deals with a generator having an output line for electrically connecting a generator to a transformer, comprising: a cylindrical inner conductor including an internal conductor tube and an external conductor tube; and a cylindrical cladding tube connection region, arranged concentrically with respect to the inner conductor, wherein current paths in a longitudinal direction of the inner conductor change between the external conductor tube and the internal conductor tube at least once (claims 1, 16, 19, and 22).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

5. Applicant's arguments filed July 19, 2005 have been fully considered and they are persuasive. Specifically, the applicant's argument that "while GB may disclose the current from the electrical apparatus may arguably travel through tubes 28 and 29 in parallel, the path of the current flowing through the tubes 28 and 29 does not "change between the external conductor tube and the internal conductor tube at least once, as claimed" is persuasive and therefore the claims have been allowed.

Communication

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William H. Mayo III whose telephone number is (571)-272-1978. The examiner can normally be reached on M-F 8:30am-6:00 pm (alternate Fridays off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dean Reichard can be reached on (571) 272-2800 ext 31. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
